

Workshop Shelters

Uniteam have delivered several solutions on workshops. Similar workshop shelters are in operational use with the armed forces of Norway, Sweden, Denmark, The Netherlands as well as NATO and The United Nations.

One edition of Uniteams Workshop Container.

From our experience we are proposing the UNITEAM ISO (1CC) 20'x8'x8'6" CSC (Convention for Safe Containers) Approved and Certified Steel Shelter, fully compliant to ISO 1496-1. The shelter is certified by Germanischer Lloyds.

The shelter is constructed within a 20' CSC Approved Steel ISO Container, offering no on-site erection tasks, only levelling and connection to services. As a ready constructed steel ISO container there are no joints to leak. The container is re-usable multiple times, with an in-service life of at least 20 years. This shelter configured for mobilization onto a Standard Logistics Truck, can be handled by crane, fork lift truck or hook-lift system (by means of a DROPS flat-rack). Due to its CSC Approval and ISO dimensions it can be transported by air, sea, rail or road. It can be operated either from the ground or mounted on a truck or trailer. Due to its design it will be Ready for Operation

within 5 to 10 minutes after arrival on site.

It has proven its functionality and robustness during field operations and exercises in the mentioned countries as well as in UN and NATO Operations in The Balkans, Turkey and Africa.

Workbench.

Fixture and fittings must be in highest quality to provide a reliable working environment.

20' shelter configured for mobilization onto a Standard Logistics Truck.
